

Acrobatico

About Us

We are an independent software company, formed in 1991 and specializing in airline systems. Our Crew Records, Crew Management and Flight Ops Management systems are designed to be adapted to fit the needs of each user airline. Thus we are able to supply tailor-made systems for the price of off-the-shelf packages.

At Acrobatico, we make software to fit the airline - not the other way around.

Support

It isn't enough to produce flexible, powerful and reliable software. Users need a responsive support team, able to give advice on how to tackle new situations and to implement solutions - all within a time frame which meets the operational need.

At Acrobatico, we know that a speedy, informed response to users' questions and requirements is essential. That's why our software developers are also our client support advisers.

Environment

Our systems have simple hardware requirements and installation. They run on one or more Sun Unix servers using an Oracle RDBMS. The systems are easily integrated with any ethernet PC network, the servers are simply other devices on the network. The PCs are then used as terminals of the Unix servers.

Implementation

As Oracle Alliance Partners we can supply everything necessary to guarantee the on-time implementation and trouble-free operation of our systems. Our support commitment covers training, advice, software updates and regular consultations to ensure we meet the needs of our clients.

Users

Our clients are involved with every kind of flying - scheduled and charter, feeder, short and long-haul, passenger and freight.
